

PADDELGIGANT

The Biogas components: agitator technology from agriKomp

PADDELGIGANT
Die Biogas Komponente: Rührwerk

robust, tried and tested & efficient

Cutting-edge renewable resources agitator technology

We developed the Paddelgigant especially for substrates with a high proportion of fibrous, re-growth material. The four tilted paddles caused differing directions of flow, through which the re-growth material and the slurry or manure are mixed to an optimum in the digester.

The Paddelgigant offers many advantages

- most frequently used agitator in Germany
- ideally suited for the fermentation of grass silage and manure, as well as other substrates
- economical energy consumption
- good mixing without disturbing bacteria
- reliable, even with high DS content
- maintenance-free sealing of wall conduit
